Open your band box.
Follow the steps to attach
your band to watch.
Abre la caja de la pulsera.
**Sigue los pasos para colocar
la pulsera en el reloj.**

Charger attaches magnetically
to the back of the case.
**El cargador se adhiere
magnéticamente a la parte
posterior del estuche.**

To choose a complementary watch face,
touch and hold the watch display, or open
the Watch App on your phone
and tap Face Gallery.
**Para elegir una esfera de reloj complementaria,
mantenga presionada la pantalla del reloj o abra
la aplicación Watch en su teléfono
y toque Galería de esferas.**

App Download Link

Download App from Google Play store or Apple
App store. Sign up to create your account and
enter your basic information.
**Descarga la aplicación desde la tienda Google
Play o la tienda App de Apple. Regístrate para
crear tu cuenta e ingresa tu información básica**

NOTE:
Using the "ALWAYS ON SCREEN" feature,
activating it when you lift it, and/or activating the screen's
maximum brightness, will result in decreased battery life.

NOTA:
El uso de la función "ALWAYS ON DISPLAY".
activar al levantar y/o activar el brillo máximo de la pantalla,
ocasionará una disminución de la duración de la batería.

WATCH FACE CARAS DEL RELOJ

Raise wrist or tap the
display to fully activate
the watch face.
**Levante la muñeca o toque la
pantalla para activar completamente
la esfera del reloj.**

Swipe up to view recent Apps,
and down for notification.
**Desliza hacia arriba para ver las
aplicaciones recientes y hacia abajo
para ver las notificaciones.**

Swipe up to switch watch face.
Press the display to customize.
**Desliza hacia arriba para cambiar la
esfera del reloj. Presiona la pantalla
para personalizarla.**

Press to enter
custom functions.
**Presione para ingresar
a funciones
personalizadas.**

Press and hold 3"
to enter custom
functions.
**Mantenga presionado
3" para ingresar a
funciones
personalizadas.**

Swipe up to switch watch face.
Press the display to customize.
**Desliza hacia arriba para cambiar la
esfera del reloj. Presiona la pantalla
para personalizarla.**

FUNCTION KEY DEFINITION DEFINICIÓN DE TECLA DE FUNCIÓN

Turn to scroll.
Girar para desplazarse.

Press to return to watch face.
Presione para regresar a la pantalla del reloj.

Press and hold for Siri, or raise
wrist to mouth and speak.
**Mantén presionado para hablar con Siri o
levanta la muñeca cerca de la boca y habla.**

Lightly press to return.
Presione ligeramente para regresar.

Press and hold to turn watch ON or OFF,
or to make an emergency call.
**Mantenga presionado para encender o
apagar el reloj, o para hacer una llamada
de emergencia.**

FCC Statement
1. This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:
(1) This device may not cause harmful interference.
(2) This device must accept any interference received, including interference that may cause undesired operation.

2. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE:
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
-Reorient or relocate the receiving antenna.
-Increase the separation between the equipment and receiver.
-Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
-Consult the dealer or an experienced radio/TV technician for help.

SAR Information Statement
Your wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to radiofrequency (RF) energy set by the Federal Communication Commission of the US Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or

SAR. The SAR limit set by the FCC is 16 W/kg.⁷ Tests for SAR are conducted with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating can be well below the limit. This is because the phone is designed to use the lowest power level needed to reach the network. The lower the power output of the phone, the lower the SAR value. Before a phone model is available for sale to the public, it must be tested and certified by the FCC that it does not exceed the limit established by the government adopted requirement for safe exposure. The tests are performed in positions and locations (e.g. at the ear and worn on the body) as required by the FCC for each model. The highest SAR value for this model phone when tested for use at the ear is 0.396W/kg and when worn on the body is 0.396W/kg. SAR values for this model phone when tested for use at the head are 0.396W/kg and when worn on the body are 0.396W/kg. These limits are set by the FCC and the SAR values for this model phone may differ among phone models, depending upon various accessories (e.g. FCC requirements). The maximum tested SAR in hotspot mode is 0.498W/kg. While there may be differences between the SAR levels of various phones and at various positions, they all meet the government requirement for safe exposure. The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels evaluated as in compliance with the FCC RF exposure guidelines. SAR information on this model phone is in the file with the FCC. This file can be found under the Docket ID number in the FCC website (e.g. http://www.fcc.gov/encyclopedia/). Additional information on Specific Absorption Rates (SAR) can be found on the Cellular Telecommunications Industry Association (CTIA) website at <http://www.wow-com.com>. In the United States and Canada, the SAR limit for mobile phones used by the public is 1.6 watts/kg (W/kg) averaged over one gram of tissue. The standard incorporates a substantial margin of safety to give additional protection for the public and to account for any variations in measurements.

Body-worn Operation
This device was tested for typical body-worn operations. To comply with RF exposure requirements, a minimum separation distance of 10mm must be maintained between the user's body and the handset, including the antenna. Third-party belt-clips, holsters, and similar accessories used by this device should not contain any metallic components. Body-worn accessories that do not meet these requirements may not comply with RF exposure requirements and should be avoided. Use only the supplied or an approved antenna.
